

Medical Technology

Corresponding to the wide range of parts that are manufactured in this field, EVT offers a similarly broad spectrum of plants and optional features for cleaning and degreasing them. At the small end of the portfolio are the BAMBINO and NANO, which are suitable for cleaning and degreasing dental implants, for example. A larger example is the GIGANT for degreasing artificial joints. In all cases, in designing your plant we focus on the parts to be cleaned and degreased, their shapes and any possible undercuts, indentations and cavities. This results in an EVT plant that is equipped with all essential auxiliary functions while dispensing with those you will not need. The result is a bespoke, affordable special-purpose plant that is superior to “off-the-shelf” plants in every respect. We are ready and willing to meet your needs and are looking forward to your inquiry!
