

NEW!

New quick exchange collet holder from OTEC

With the new quick exchange collet holder system from OTEC, tools such as drills and burs in drag finishing machines can be changed in a matter of seconds. Using the special forked key (see Fig. 1), the tool can be easily removed and a new one inserted. Tension is provided by an exchangeable chuck (see Fig. 3).

Fig. 1

Fig. 2

The attachment system is designed so that the entire holder can be changed at the touch of a button (see Fig. 2) or if required, the chuck can be changed on its own (see Fig. 3).

Chucks are available in the sizes 3 – 18 mm.

Fig. 3

Highlights:

- » Quick change: tools can be changed in a matter of seconds
- » The entire holder can be changed
- » Easy to change just the chuck
- » Reliable low-cost solution
