

# OPTICS

One of the specialities of EVT Eiberger Verfahrenstechnik GmbH is cleaning of optical parts. We have already met many of the multiple requirements posed by the optical industry, using a wide range of cleaning media.

EVT systems of several series are used by major internationally known firms in this sector. We cordially invite you to visit our plant in Sternenfels, Germany. There we can discuss practical details with you, plan the first steps towards customising a system to meet your needs, and carry out cleaning trials in our test centre. We are looking forward to mastering your challenge!
